a Retention against number of pulses
retention (teacher-forced pitch accuracy)
fraction of steps with a dopamine pulse
frozen layer
every step
error-count pulses, shuffled
novelty pulses, shuffled
no dopamine
threshold on ν (latent excess)
threshold on ΣC⁺ (error count)
b Tolerance to perturbation
fraction flagged as new
beats substituted in a learned 12-beat context
learned, unperturbed
plastic + novelty: ν > 0
frozen random layer: ν > 0
plastic: ΣC⁺ > 0
